

Recovery Mode

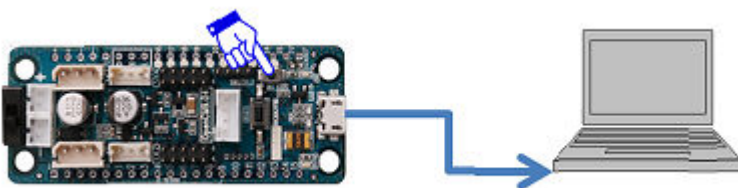

If you are unable to download and the message “Board is not responding” shows up, please try using the recovery mode to force the download.

If you force the download once, the board should be recovered and normal downloads will be possible again.

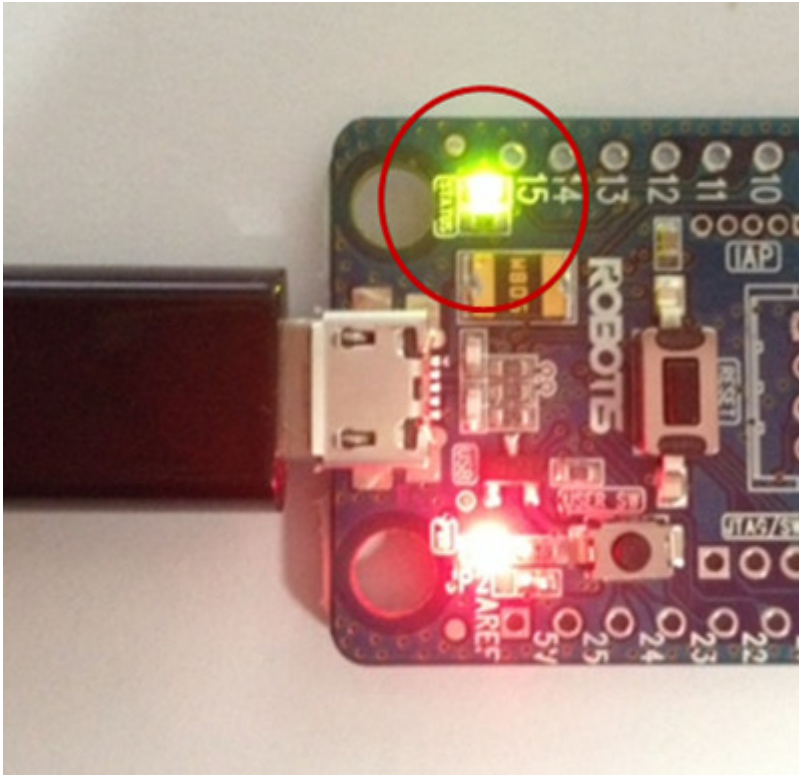

Hold down the User Button on the OpenCM9.04 and connect the board to a PC using a USB cable.

Please have any other power source disconnected, and just connect to the USB while having the User Button held down.

<Hold down the User Button when entering recovery mode.>

When successful, the green LED should stay on as shown in the image below. When the download is completed the board will reset and the LED will turn off.

If unable to download, you must remove any code that may disturb the USB interrupt in the code you wrote.
